Education

2020 – Present	**University of Minnesota**, Minneapolis, MN Ph.D. Candidate, Health Services Research, Policy, and Administration — Health Economics Track
2017	**Providence College**, Providence, RI B.A. Business Economics | Minor: Mathematics

Research & Teaching

2025	**Teaching Assistant**, Health and Health Systems (PubH 6556), University of Minnesota, Division of Health Policy and Management Instructor: Dr. Hannah Neprash
2022 – Present	**Research Assistant**, University of Minnesota, Division of Health Policy and Management PI: Dr. Ezra Golberstein (2023 – Present) PI: Dr. Peter Huckfeldt (2022 – Present)
2020 – 2022	**Research Assistant**, State Health Access Data Assistance Center (SHADAC)

Employment & Service

2023	**Ph.D. Student Representative**, University of Minnesota, Division of Health Policy and Management
2021 – 2022	**Instructor**, Ph.D. Student Math Review, University of Minnesota, Division of Health Policy and Management
2017 – 2020	**BerryDunn**, Health Analytics Practice Group, Portland, ME Senior Consultant (2019 – 2020) Consultant (2017 – 2019)

Job-Market Paper

Site Neutral Payments: The Effect on Long-Term Acute Care Hospitals

Medicare payment differs for similar services across care settings, creating an incentive for healthcare providers to treat patients where reimbursement is highest and potentially raising costs to the program unnecessarily. Congress has established "site-neutral" policies seeking to align patient clinical need and treatment intensity by decoupling payment from the service location. Such policies reduce cost, but could also limit access to higher-level care settings for patients who need them. I study a large Medicare site-neutral payment reform in which Long-Term Acute Care Hospitals - which provide extended hospital-level care - were reimbursed at the lower, "site-neutral" acute care hospital rate for certain low acuity patients. To

evaluate the policy, I simulate revenue changes at the diagnosis and facility levels that predict policy-induced reimbursement changes using pre-policy patients and post-policy rules. At the facility-level, LTACHs with greater exposure to the policy were more likely to close. Surviving facilities saw reductions in profitability, but were able to mitigate losses by admitting more patients with commercial insurance.
